

The Computer Deconstruction Laboratory, AKA The Jersey Shore Makerspace

Our Motto: Give someone a fish and they eat for a day; Teach someone to fish and they eat for life

Our Goal: Lifelong Education for our Members and the Community.

Who we are: A bunch of makers, and tinkerers, who like to build projects, maintain old and new technology and share our skills with each other and the community.

Our Laboratory: Extensive variety of tools to support making:

- Laboratory work benches
- State of the art 3D printer
- CNC machine for carving wood and etching printed circuit boards
- Many different types of hand tools
- Power tools: drill press, hand drills, saws, lathe, etc.
- Wide stock of electronic parts (when you just need one item to complete your project and you left it home)
- Various computer cables, and computer parts
- Arduinos, and Raspberry Pi's to use in the laboratory
- Computer to control 3D printer and CNC machine
- Laser Printer
- Mead Telescope with camera

What we do: We each have our own projects to work on at the laboratory and we share our skills with each other to improve all of our knowledge

What we offer to our members:

- Monthly members: Use of our Laboratory during regular hours of Wednesday, Sunday and Monday nights
- Yearly members: Additional use of our laboratory at any time (no sleeping overnight)
- Free classes on Technology
- Free Technical Talks on the latest and older technology

What we offer to the Community:

- Mentorship to HS Students on their Senior Projects
- Free Learn to Solder at our Laboratory during Museum hours with Museum entry

How we support InfoAge:

- We provide and maintain the servers that provide voice and data services to the entire complex
- Our laboratory and tools are used by other museums for making and maintaining exhibits.
- We are open on Sundays and Wednesdays during museum hours

Our Web Presence:

- <https://compdecon.github.io/>
- <https://compdecon.org/>
- <https://groups.io/g/cdl/topics>

What we have offered in the past:

- Class on Python
- Class on Arduino
- Class on Raspberry Pi
- Robots for kids
- Class on Basic Electronics
- Class on Basic Wireless
- Technical Talks on a variety of topics, for example (not a complete list)
 - Astronomy
 - Artificial Intelligence
 - Linux for Beginners
 - Intro to Vacuum Tubes
 - Intro to 3D printing
 - How a semi-conductor foundry is built and works
 - Celestial Navigation in the absence of GPS
 - Our Home the Milky Way Galaxy
 - What came before the Big Bang
